

Ful-FAQ

created from prehistoric plant material

This informational material is compliant with OR and CA department of agriculture labeling requirements for humic substances, and is intended for customers in these states. For customers in other states additional materials can be found at www.BioAg.com.

Why is Ful-Power important for my plants? Humic substances are a missing link in most plant systems, especially container and hydroponic gardening. It will even give the best system that ultimate boost.

How will my plants benefit from using Ful-Power? In Oregon and California the only claim that is allowed is “may increase nutrient uptake”. Other states recognize the different benefits cited in the research and allow them to be listed. We recommend all humic substance users conduct further research on humic substances. A good place to start is the International Humic Substance Society.

Is Ful-Power compatible with all nutrients? Ful-Power is completely compatible with all nutrients. Ful-Power is a true golden isolate. Our unique cold-microbial process (fermentation) creates a biostimulant, free from nuisance chemicals, that is much more effective than crude water-leached products. There are no fillers, preservatives or other nutrients.

Is Ful-Power compatible with my system? Ful-Power works in harmony with all types of systems. Because it’s purified by a biodigestion it will not clog, gel, gum up, or clump. It can be used in soil, hydroponic, aqua-culture, large scale farm, irrigation, horticulture, sand beds, drip systems, precision jet systems, remediation, compost tea...let’s just say we have not found a system where it’s not compatible.

Does Ful-Power effect my pH? Ful-Power has little to no effect on your nutrient pH when diluted to recommended rates. In fact, it acts as a pH buffer and will not effect pH negatively.

Does Ful-Power effect my ppm? Ful-Power will not effect ppm in any noticeable way. This means you do not need to compensate for unwanted nutrient values and the product can be integrated into your existing program with ease.

Can I use Ful-Power when I foliar feed? Ful-Power is a must with all foliar applications. Why? Please refer to the answer for question two above. Follow label instructions.

Can I mix Ful-Power with pesticide sprays, organic or not? Yes you can. Consider reducing pesticide application rates by 1/4-1/3 when used in combination with Ful-Power.

Can I use Ful-Power on cuttings? Ful-Power is excellent when used on cuttings. Why? Please refer to the answer for question two above. Follow label instructions. Foliar spray unrooted cuttings. When roots form use as a foliar and/or root drench.

Can I use Ful-Power on seeds? Like cuttings, Ful-Power is excellent when used to start seeds. Why? Please refer to the answer for question two above. Follow label instructions.

Can I use Ful-Power if I want to grow organically? Ful-Power is as natural as it gets. It is listed by OMRI and meets all NOP standards.

Does Ful-Power expire or go bad? Ful-Power is completely stable and will not degrade on the shelf. It’s stamped with an expiration date two years from date of bottling, but it’s already over 45 million years old.
