

created from prehistoric plant material

Ful-Power hydrophobic fulvic acid can amplify the effects of other products. Nutrients, supplements and/or other application rates MAY need to be decreased by 10-30% when used with Ful-Power. Watch plants when first adding Ful-Power to your program or changing products, especially if you are a heavy feeder. Ful-Power contains no chemical extractants or nutrients, so any signs of burn or toxicity are from increased penetration of other products being used.

USE OPTIONS

<b>MINIMUM</b>	Spray at the rate of 20 mL per gallon every 5-7 days until the 3rd or 4th week of flowering (when flower clusters are too dense to shed moisture quickly).							
mL/G	ROOT FORMATION 1-2 WEEKS	YOUNG VEG WEEKS 2-4	MATURE VEG ~WEEK 4+	TRANSITION 1 WEEK EITHER SIDE 12:12	FRUIT/FLOWER SET	FRUIT/FLOWER SIZING	FRUIT/FLOWER RIPENING	FLUSH/ RINSE
<b>MODERATE Root Drench</b>	20	10	15	20	30	30	30	30
<b>MAXIMUM Roots/Foliar</b>	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar	30 Root / 20 Foliar

GROWER TIPS

1. Spray unrooted cuttings with a 30mL/gallon solution to help reduce stress and encourage rooting.
2. Adding Ful-Power to any spray can enhance/amplify the effectiveness of other ingredients of the spray.
3. Soak seeds at 35mL/gal for 24hrs (seeds with thin coatings may only needs 4-12hrs and seeds with thick coatings may need up to 72hrs).
